About us

BulkSMS.com provides application-to-person (A2P) messaging services to large and small businesses, public benefit organisations and individuals.

We were one of the first commercial web-based messaging platforms, launched in 2000, and we now connect our customers to over 800 GSM networks in more than 200 countries.

We provide a standard platform to allow our clients to quickly deploy short and important messages using SMS communications. Our SMS platform allows for SMS API integration, SMS competitions, SMS voting, SMS information services, SMS campaigns and more.

We offer several solutions for sending and receiving SMS messages. Once registered on the BulkSMS platform, a user has unrestricted access to all of them. Our products include:

SMS Gateway API – The EAPI (Electronic Application Programming Interface) allows you to SMS enable your own applications. The EAPI can be used for tasks that range from automatic notifications to message delivery statuses.

BulkSMS Text Messenger – The BulkSMS Text Messenger (for Mac or PC) makes two-way messaging to a group or individuals even easier. This feature-rich software is quick to install and easy to use.

Web to SMS – Your BulkSMS account enables you to log in from any internet enabled device and communicate instantly via bulk SMS text messaging. Additional account features allow you to send messages from your mobile phone or your email client.

BulkSMS App – The BulkSMS App enables you to send bulk SMS text messages from your iPhone, iPad or iPod.

Incoming Numbers – BulkSMS offers dedicated incoming long numbers (e.g. 44xxxxxxxxxx). These are standard rated long numbers available to customers wishing to receive Mobile Originating text messages.

Premium Rated Short Codes – Only available in South Africa.
